# DECARBONISATION

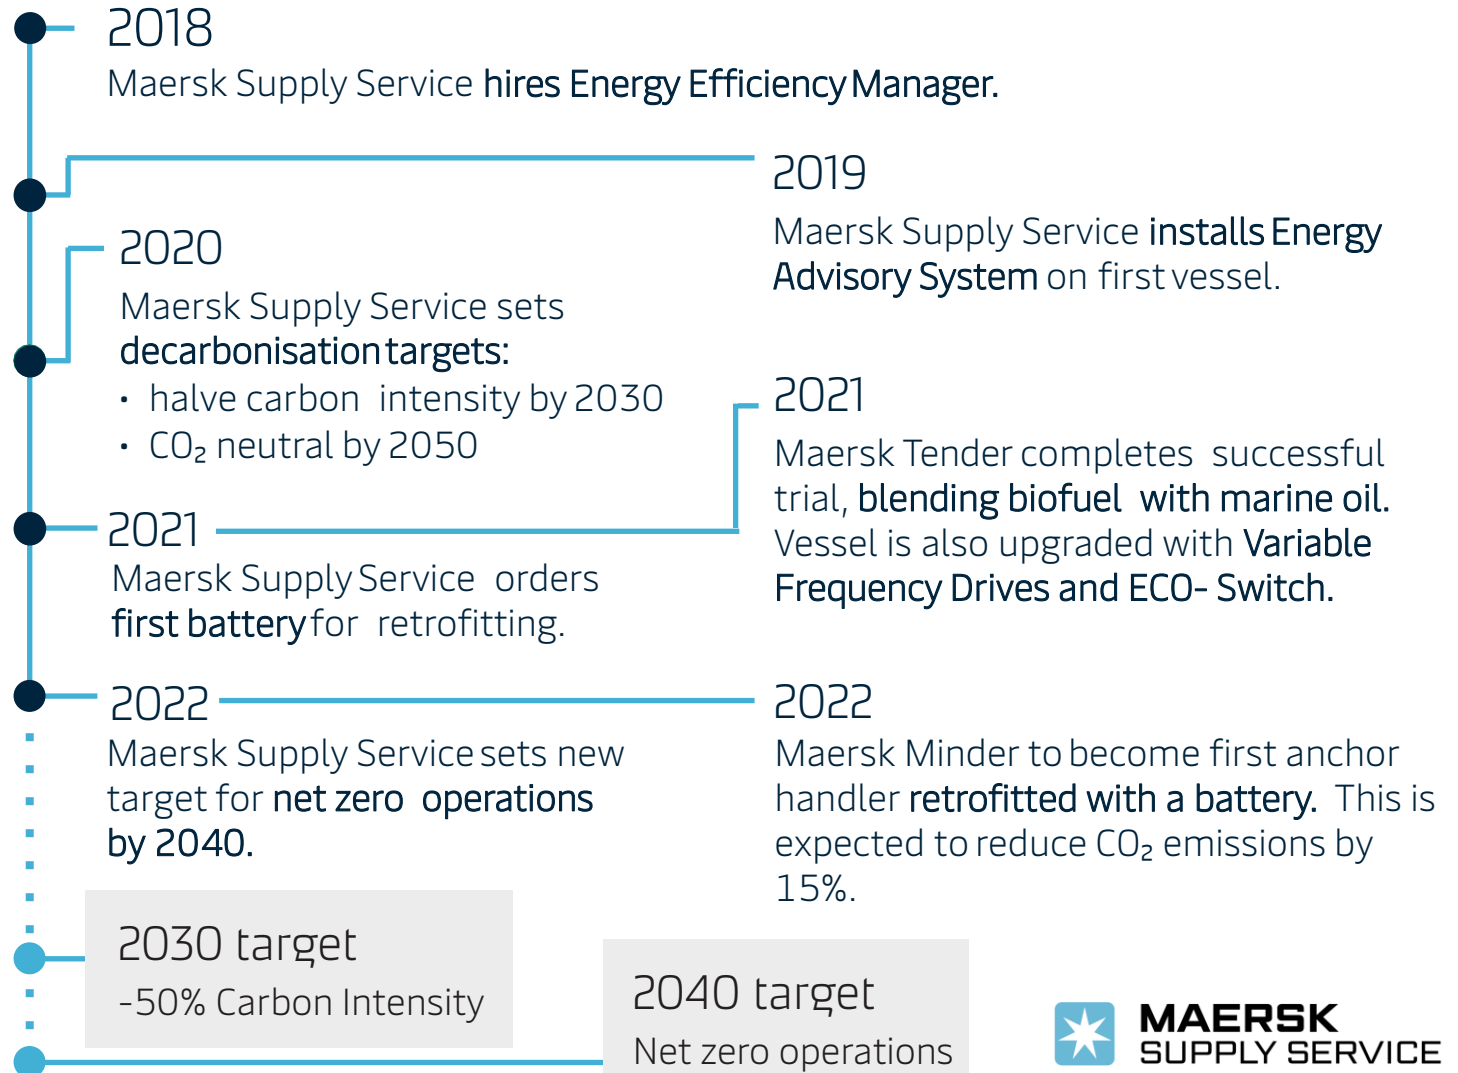

## High ambitions...

50% CO<sub>2</sub>  
emissions reduction  
by 2030

Net zero  
CO<sub>2</sub> emissions from  
our operations  
by 2040

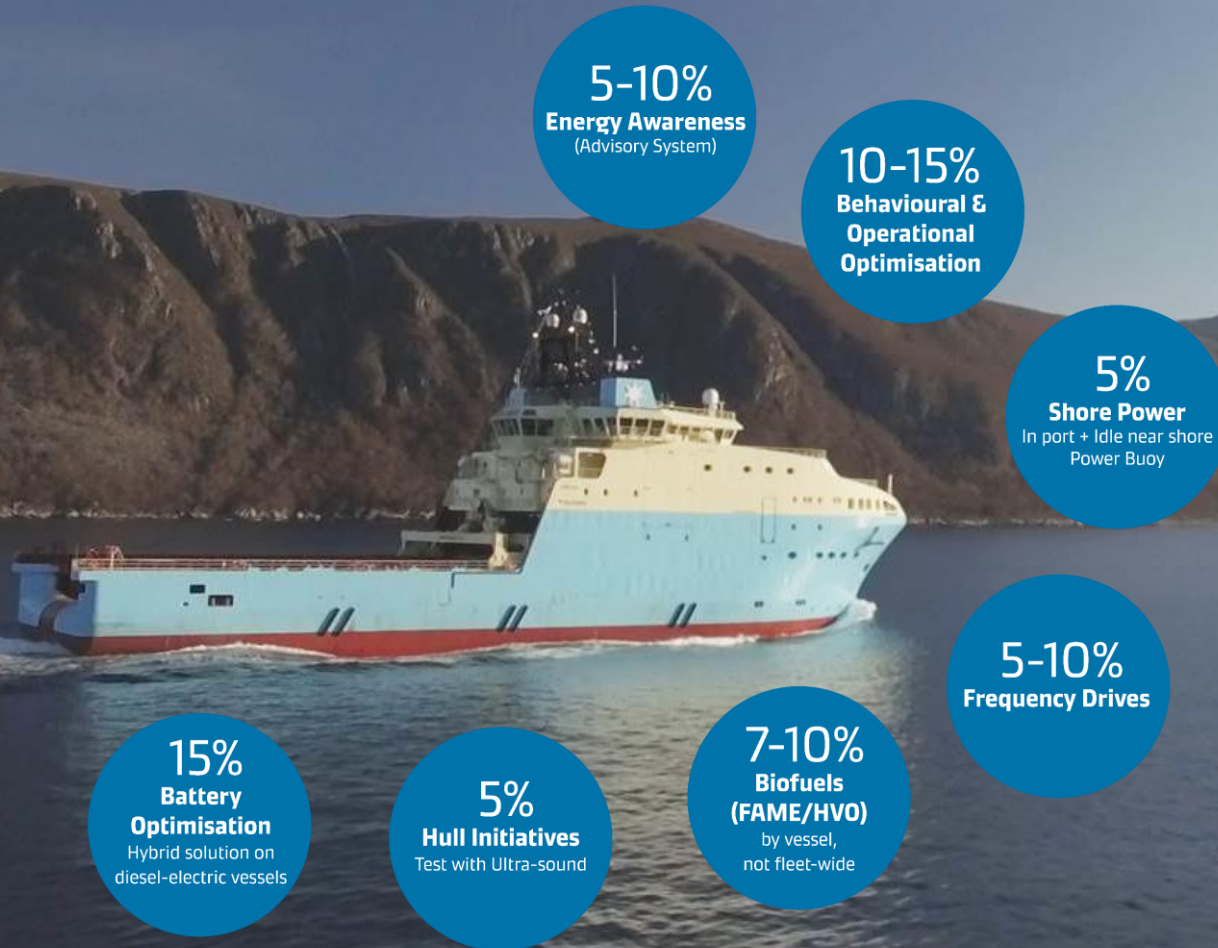

## and already many steps taken

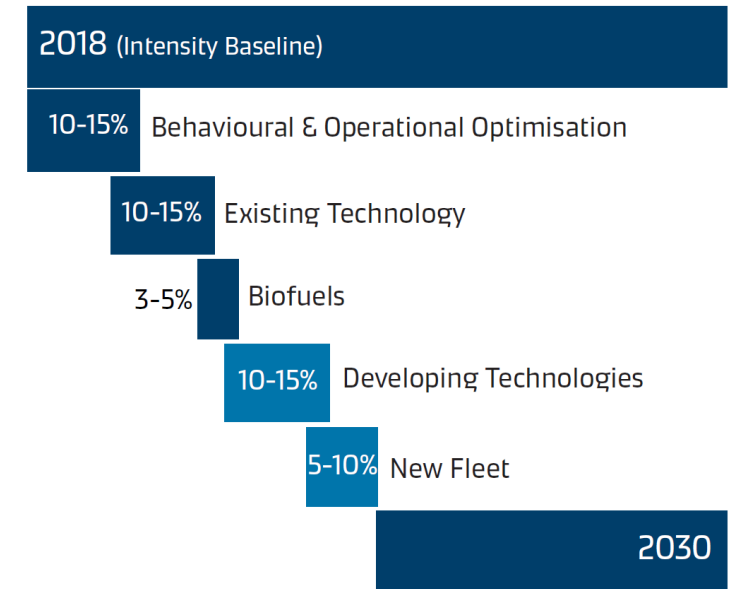

# ...With a clear road to net zero operations

To support our CO<sub>2</sub> ambitions, we are focusing on technical upgrades, digitalisation and a solid energy efficiency mindset across the fleet. We take part both in reducing our CO<sub>2</sub> emissions as well as helping improve industry standards.

## Our roadmap to the 2030 target

# OCEAN HEALTH

Maersk Supply Service is committed to proactively protecting and restoring ocean health, minimising impact of plastic waste and fuel emissions. As citizens of the oceans, Maersk Supply Service is committed to their preservation and to minimising impact.

Navigating principals for how Maersk Supply Service works with **reducing plastic** in oceans and in our own operations:

1. Use our marine expertise to help come up with solutions to rid plastic from the oceans.
2. Avoid unnecessary plastic in our operations.
3. Engage with suppliers, partners and customers to find solutions to minimise plastic use. We will be transparent about our results and learnings.

37  
tonnes

By the end of 2021, The Ocean Cleanup had collected 37 tonnes of plastic waste from the Great Pacific Garbage Patch.

# A Green Transition at Maersk Supply Service

## Our green technology and solutions

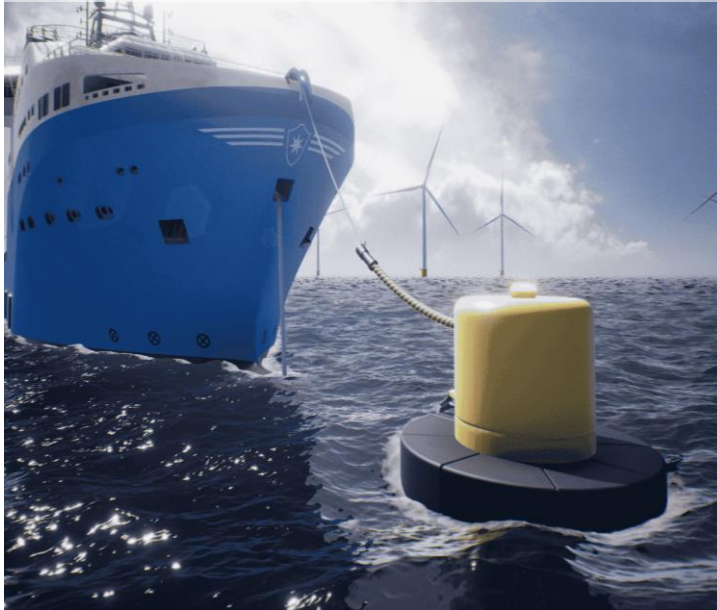

### Floating wind

End-to-end solutions with tailored work scopes

### Stillstrom

Electric charging power buoy technology

### Vertical Installer

Innovative solutions for wind turbine installation
